

Group: analyze stakeholders, roles and expectation

| Stakeholder | Student                                                                                                                                                      | Operator                                                                                                                                                           |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Role        | End user uses Smart E-Mobility Hub network for vehicles transportation, parking and charging                                                                 | Operational user monitoring Smart E-Mobility Hub network and coordinating incidents, resources usage                                                               |
| Expectation | Convenient access to available vehicles and hubs, accurate availability and battery information, reliable reservation, efficient parking and charging system | Clear network visibility, real-time status information, handling operational incidents, charging scheduling, vehicles redistribution, optimal resources allocation |
